CATALYTIC ACTIVITY:

nicotinamide + {ADP-D-ribosyl} (N+1) -acceptor.

nicotinamide + {ADP-D-ribosyl} (N+1) -acceptor.

SUBUNIT: Oligomerizes and associates with TNK2. Interacts with the cytoplasmic domain of InPEP/Otame in SLC2A4/GLUT4-vesicles. Binds to the N-terminus of telomeric TRF1 via the ANK repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the telomeric PARP, tankyrase,

Has PARP activity and can modify TRF1, and thereby contribute to the regulation of telomere length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  28-FEB-2003 (Rel. 41, Last sequence update)

SUBCELLULAR LOCATION: Cytoplasmic, associated with the Golgi and with juxtanuclear SLC2A4/GUTV4-vesicles. A minor proportion is also found at nuclear pore complexes and around the pericentriclar matrix of mitotic centromeres. During interphase, a small fraction of TMXS is found in the nucleus, associated with TRF1.

Note=No experimental confirmation available;
TISSUE SPECIFICITY: Ubiquitous; highest levels in testis.
PTM: Upon insulin-stimulation, phosphorylated on serine residues by MAPK kinases.

-1- SIMILARITY: Belongs to the PARP family.
-1- SIMILARITY: Contains 15 ANK repeats.
-1- SIMILARITY: Contains 1 sterile alpha motif (SAM) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nuclear protein; Repeat; ANK repeat; ADP-ribosylation;

"Properties of the P-type Appease encoded by the copAP operons of
Helicobacter pylori and Helicobacter felis.";
J. Bacteriol. 180:317-329(1998).
-! - FUNCTION: PROBABLY INVOLVED IN COPPER EXPORT.
-! - CATALYTIC ACTIVITY: ATP + H(2)O + Cu(2+)(In) = ADP + phosphate +
Cu(2+)(Out).
-! - SUBCELLULAR LOCATION: Integral membrane protein.
-! - SIMILARITY: Belongs to the cation transport Afpases family (P-type
ATPASES). Subfamily IB.
-! - SIMILARITY: Contains 1 HMA domain.

-!- CATALYTIC ACTIVITY: ATP + L-alanine + tRNA(Ala) = AMP +

-!- CATALYTIC ACTIVITY: ATP + L-alanyl-tRNA(Ala).

-!- CATALYTIC ACTIVITY: Cytoplasmic.

-!- SUBCELLULAR LOCATION: Cytoplasmic.

-!- SIMILARITY: Belongs to class-II aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   STRAIN=HBB / ATCC 27634;

Sequence 25596, Application US/09252991A

Patent No. 6551790

General Information:
APPLICATION

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONA

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONA

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196,136

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,190

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5

Membrane-bound proteins and related nucleotide sequences.

Claim 12; Fig 290; 822pp; English.

The invention provides membrane-bound PRO polypeptides and polynucleotides encoding them. The PRO sequences of the invention were polynucleotides encoding them. The PRO sequences of the invention were identified based on extracellular domain homology screening. The PRO sequences have homology with proteins including LDL receptors, TIE cligands and various enzymes. The membrane-bound proteins and receptor ingands and various enzymes. The membrane-bound proteins and receptor continuncadhesins, for instance, can be used as therapeutic agents to block receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially by recombinant techniques

The LSG has high level of tissue specificity for lungs and is overexpressed in cancerous tissues. The sequence serves as a diagnostic marker for detecting, monitoring, staging and prognosticating lung cancer. The diagnosis involves comparing levels of LSG in samples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MKLAALLGLCVALSCSSAAAFLVGSAKPVAQPVAALESAAEAGAGTLANPLGTLNPLKLL 60

AAZ98109 to AAZ98242 encode AAY87224 to AAY87357 which represent the thuman signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, nepatotropic, associated with decreased activity or function of HSPP. Such diseases include cell proliferation activity or function of HSPP. Such diseases include cell proliferation (including cancer), inflammation, cardiovascular, neurological, cirproductive or developmental disorders, (e.g. arteriosclerosis, corpreductive or developmental disorders, (e.g. arteriosclerosis, craftma, Crohn's disease, microbial or other infections, congestive or ischaemic heart disease, Alzheimer's, Parkinson's or Munington's diseases, Schizophrenia, ovulatory defects, muscular dystrophy). HSPP concleic acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for detecting HSPP in standard hybridisation and amplification assays (for detecting HSPP in standard hybridisation and samplification assays (for detecting HSPP in therapeutics, for detecting related sequences or genetic variations, and for chromosomal mapping, HSPP are also used to raise competitive drug screens, and for purification of HSPP from natural incompanients, and for purification of HSPP from natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MKLAALLGLCVALSCSSAAAFLVGSAKPVAQPVAALESAAEAGAGTLANPLGTLNPLKLL 60
